

Science Club

Report of activities in the year 2015-16

Science club is functioning in the college to inculcate scientific rational thinking in students and to propagate messages against prejudices prevailing in the society. Creating awareness among students and general public on conservation measures, after effects of blind consumerism and environmental issues also form part of its activities. Due to non-availability of any financial assistance from any source the club confined its activities to a few poster presentations. Notable among them was one on energy conservation .the members also took part in an oath taking on the occasion.
